

ewo expands

ewo is pleased to announce the establishment of ewo Austria GmbH in January 2015 and ewo Deutschland in June 2015. The lighting company, based in Kurtatsch, continues on its path of growth. After creating a number of international agencies ewo has now decided to establish its own subsidiary companies. Flora Kröss: “Opening up new markets and serving them well is crucial for the development of our company. At the same time it’s also important to us to exercise good judgment as we move forward – always walking on solid ground from a financial perspective. We look forward to taking on new challenges!”

ewo creates high-quality lighting systems for public spaces. At the main facility of this family-run business, headquartered in South Tyrol, products are developed which bring light to a variety of different settings: streets, squares and buildings; walking trails, urban gathering points and airports. A modular LED unit forms the basis for our sustainable and energy-saving lighting scenarios, irrespective of scale. The company’s progressive technology, differentiated know-how and creative openness has made it a trendsetter for the sector. Even in the most challenging of settings, ewo provides custom-tailored solutions for distributing, limiting and controlling light – solutions that have become a quality feature in the design of public spaces.
