

## ewo – Success throughout the World with its LED High-Mast Systems

At inter airport Europe 2015 in Munich, ewo will proudly present a brand new product line for illuminating large areas, as well as its expanded, tried and true F-System.

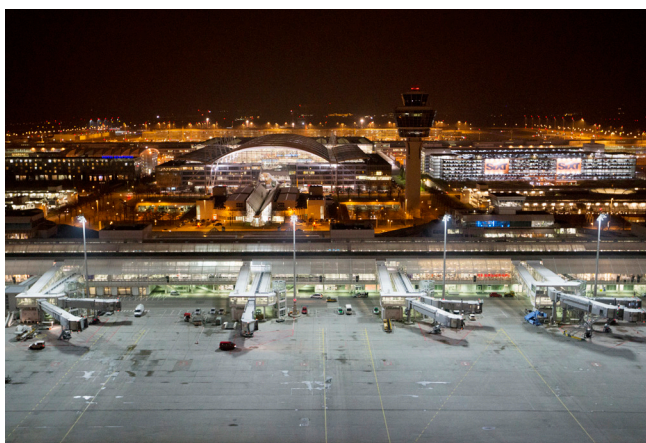

**Press Conference and Aperitif: October 7, 2015, 3:00 P.M., Stand 1430, Hall B5.**

For more than 15 years now, ewo has been involved with high-mast lighting systems for illuminating large areas. Our all-LED lighting solution for the apron areas at Innsbruck Airport in Austria in 2011 marked the starting point for our commitment to LED technology for these high-power applications. Since that time, ewo has become an industry pioneer with reference projects worldwide, and it is especially renowned for security-sensitive airport applications.

ewo's LED F-System series of floodlights has been specially developed for large area lighting, using up to 70% less energy and requiring far less maintenance. The modular character of the technology and its diverse configuration options make it possible to fine-tune the production technique precisely to the task at hand.

**ewo at inter airport Europe, Munich, October 6-9, 2015, Stand 1430, Hall B5.**

We look forward to your visit!

The F-System makes mounting heights possible from fifteen to over forty meters with ICAO-compliant lighting by means of LED lens technology.
