F-System Large 90

There are few areas of public life in which the subject of security takes on such a critical position as in air traffic. The lighting on the apron creates security if it provides its service without compromise, meets all standards, and is reliable and durable.

ewo is the forerunner in the use of LED technology for large areas and represents the highest standards in airports and logistics areas. The products have proven themselves for both smaller regional airports and for global hubs. They are so robust that they have been used in the Siberian winter but also function reliably in the Arabian heat. Maintenance is required more rarely and, as a result of the modular construction, is also greatly simplified.

The people who work on-site are convinced: the lighting is perceived as brighter, and as a result of the higher color rendering index, things such as documents can be better recognized. Wherever light is needed, it is even and available without dazzling. That reduces stress and tension at work and, in so doing, increases the level of security. Products from ewo are used in squares and pathways, in pedestrian malls and parks, as visible objects, and in the service of carefully considered lighting concepts, the goal of which is the wellbeing of people.

With our flexible systems, we can adapt every individual light source to the details of a situation, create visual structures and rhythms and, in so doing, define the spatial perception. A high standard of design sets ewo's luminaires apart; at the same time, they maintain a low profile with respect to the special character of a location. With regard to the material, form, or technology, customized special solutions may be drawn up as desired.

We continue to develop the possibilities for intelligent control. Changing accentuations or courses of time can create a multitude of scenarios—dynamic spatial perception thus becomes a part of the lighting that is provided. From medieval cultural buildings to contemporary urban designs—ewo's lighting systems are flexible depending on the context. In some projects, understatement is the best path. At other sites, our forms help to structure the architecture or integrate technical functions within the housing. But modular, configurable systems are always in use which precisely reach the desired degree of light distribution, colorfulness, direction, and intensity. Façades and textures become visible; soft transitions or precise demarcations are created; the surroundings enter into atmospheric dialogue with the edifice.

Our products are used not only in front of and on buildings, but also in interior spaces. We combine production quality and constantly developing technology with an open, creative attitude. For many architects and lighting designers, that makes us the first contact when realizing completely novel solutions. Good street lighting is rarely perceived consciously. And yet effective illumination is the precondition for safe mobility at night. Systems from ewo are arranged to meet the different demands that are required in road traffic. The modular systematology of our LED technology provides the necessary flexibility as a standard feature: the distribution of light, the light intensity, and the beam angle can be adapted to every situation along the road. Shining into the night sky is avoided. Products from ewo mean economical investments with low maintenance expenditures and longer life. Sensor technology and digital controls can help in using light in an even more need-oriented manner and thus increase even further the already high energy efficiency of the LED technology.

## Airports and Logistics

Munich Airport, Germany, 2012 This is the largest LED project at a German airport: all of the park positions at Terminal 1 are illuminated with floodlights from ewo. The energy savings compared to the predecessor system are around 57 percent.

Munich Airport

Linz Airport, Austria, 2014

After Innsbruck, Linz was the second Austrian airport to be outfitted completely by ewo. We developed light panels that were 5.3 meters by 4.8 meters. For maintenance, they can be lowered from a height of 34 meters to ground level.

Linz Airport

Innsbruck Airport, Austria, 2011

The realization that LED technology provides improved light quality with lower costs while protecting the climate and the night sky was the deciding factor: the Innsbruck Airport, as the first one in the entire world, engaged ewo to switch over the entire apron illumination to LED.

Innsbruck Airport

Hanover Airport, Germany, 2012 As the first airport in Germany to do so, the Hanover Airport replaced the complete apron illumination with LED technology. In addition to profitability and environmental protection, improved control possibilities and simpler maintenance were at the forefront for the operators.

Thule Air Base, Greenland, 2014 Reliable apron illumination in the extreme polar cold at the U.S.A.'s northernmost military base: the lamp control gear is changed in the hangar. It is connected to the panel radiators by means of heating cables.

Melbourne Airport, Australia, 2014–15 With 50 floodlights of the F32 model on six high mast systems, the first Australian airport is switching over to LED lighting. The functioning method of the system has been coordinated with the high ambient temperatures.

Molo di Ponente, Venice, Italy, 2010 The illumination of the 90,000 square meter (22 acre) port terminal is a breakthrough for ewo with the use of LED high masts in squares and extensive areas—and it has achieved energy savings of 80 percent. The finishes were specially pretreated for use in salty air.

Molo di Ponente

## Public Spaces

Piazza San Marco, Venice, Italy, 2014 Within the sensitive setting of the World Heritage Site, the 13 F-Systems on the façades are barely noticeable. They illuminate the square evenly all the way to its center.

Piazza San Marco

Glorenza-Glurns Municipal Center, Italy, 2015 The FA lighting system brings a new aesthetic clarity to a historical city center dating back to the Late Middle Ages.

ETH Campus (Swiss Federal Institute of Technology), Zurich, Switzerland, 2011 At the Hönggerberg campus, customized pole and bollard lights provide minimal lighting that has been intentionally reduced to the walkways. The perception of the night has been preserved.

Unterer Stadtplatz, Kufstein, Austria, 2012 A new pedestrian mall, and a special production from ewo: precisely directed light produces the ground illumination in a downward direction. The globe attachment on top diffusely distributes the brightness onto the surrounding buildings and brings the vertical dimension of the space into play.

Quai Rambaud, Lyons, France, 2015 The illumination along the restructured banks of the Saône River follows an integrated urban planning requirement. The EL Series with two additionally developed variations in form enriches the urban architecture and provides safe, pleasant light.

Quai Rambaud

Urban Furniture, Up Series, since 2009 Up is a project by ewo and the Norwegian design collective Norway Says. The series encompasses light bollards, bicycle stands, trash receptacles, park benches, and other objects for the urban environment. From the basic form of the bollard, a variety of additional functions result through the openings, including illumination.

Urban Furniture

Via Tragara, Capri, Italy, 2011 The EL Series is completely integrated into the walls of the walkways. The light offers sufficient orientation, while the view of the landscape and the sea remains unhindered.

## Architecture and the Arts

St Martin Tower, Frankfurt am Main, Germany, 2015 The minimalist EL steles that radiate here on both sides turn into freely position-able elements of design. They form a unit along with the building and its façade structure and also include elements of the intercom installation, a traffic light system, video cameras, and tank ventilation.

St Martin Tower

Erl Festspielhaus, Tyrol, Austria, 2013 As a counterpoint to the sharp-edged architecture, we developed a discus-shaped housing that integrates a variety of lighting functions, such as an even and precisely delimited ground illumination of the access road and a playful light-dark rhythm on the parking areas.

Villa Seligman, Frankfurt am Main, Germany, 2014 This lighting design had to be as detailed as the specifications for the building's historical preservation. A housing variation that is set in the ground and other adaptations reduce the presence of the product to a minimum.

XAL Competence Center, Graz, Austria, 2011–2013 Three minimalistic lighting variants form a single unified design. FA and EL supply every point with perfectly calculated light—on the surfaces and pathways in front of the building, and on the façade itself.

Gradonna Mountain Resort, Kals, Austria, 2011–2013 Like the sustainable architecture, the lighting respectfully refers to the mountain landscape. In several processing steps, the steel girders receive a rustproof finish, and the LED lenses are coated with an amber-colored lacquer for the special color of the light.

Museum of the Bavarian Kings, Hohenschwangau, Germany, 2011 Flat walls made from conglomerate are a part of the landscape arrangement of the prizewinning architecture. A special model from ewo is integrated into the rock with a flush mount, accentuating the terrace and pathways on both sides.

Calambrone Theater, Pisa, Italy, 2011 Spotlights from the P Series and other elements structure the space of this openair stage in various ways. They bring surfaces and forms to life in completely programmable colors, provide for a visual rhythm, and help orient members of the audience.

robatherm Factory, Scheppach, Germany, 2015 Two products, two functions, combined into a single system: FA illuminates the pathways in the factory, while EL elements are integrated into the pole that stages the façade from a distance with precisely calculated light.

Arsenali Repubblicani, Pisa, Italy, 2015

The historical character of the medieval complex influenced the architecture of the reconstruction. A special model from ewo integrates smoke detectors, speakers, and emergency lighting under the ceiling next to the lighting units.

Ovaverva Indoor Swimming Pool, St. Moritz, Switzerland, 2014 This special model is worked almost imperceptibly into the building structure. It lights up the areas under the ceiling, providing the space with diffuse, indirect light. By means of a hidden mechanism, the luminaires can be directed lower for increased brightness during swimming competitions.

Cittadella Nuova, Pisa, Italy, 2014 The steles integrate several lighting functions and also include elements of building services engineering. Warm light fills the space, while the masonry remains untouched.

## Roads and Traffic

Calcinate, Bergamo, Italy, 2010 For the first time, we are illuminating an extensive traffic junction with LED technology. The suitable quantity of lighting units is calculated to equip lighting systems of varying heights.

Zero Center, Zero Branco, Italy, 2010 The 20,000 square meter (five acre) forecourt and the access roads of the shopping center are efficiently and sustainably illuminated by means of an integrated technology concept. Visitors to the shopping center receive safe light that is evenly distributed throughout.

Nordallee, Munich, Germany, 2012 The basis of this efficiently planned economic solution is the inclusion of the existing poles. The product concept of the F System makes it possible to adapt to the constantly changing route situation over the entire course of the roadway.

Pont Schuman, Lyons, France, 2014 The challenge of the architecture: street lighting, in compliance with all regulations, from a height of only 28 centimeters (11 inches). Specially calculated lens optics in a special housing model deal with the task without dazzling and provide light all the way to the curbs.

Ponte Roma, Bolzano, Italy, 2010 The renovation of street lighting has turned into an encounter with historical substance. The form and the special color of the FN luminaires enter into dialogue with the massive, 80-year-old structure.

Ponte Roma

For 20 years, ewo has been bringing light to a variety of places: picturesque walking trails, urban gathering points, streets, buildings, cultural venues, and airports, in addition to other transportrelated and industrial settings. For us, know-how means harnessing the current state of technology in order to create custom-tailored solutions.

At our facility in South Tyrol, we develop and craft high-quality products for distributing, controlling, and limiting illumination in public spaces. Our innovations revolve around a modular LED lighting unit. It is the global starting point for precise and sustainable lighting scenarios of any scale.

We bring passionate curiosity to each and every individual challenge, whether specific lighting effects, special requirements regarding design, color and material of the luminaires, fragile or extreme settings, or explicit technical requirements. We also place great importance on cultural and artistic issues as well as on experimental interaction with architecture, art, and design.

ewo is a family business. We value clear communication—not only with each other, but also with our clients, project partners, and suppliers. Our solutions emerge out of an environment of mutual exchange and a creative and open mindset—these innovations have turned us, together with our products, into a pioneering force in the industry.

ewoLAB initiates projects with artists, designers and architects and, in so doing, addresses the resource of light on a variety of different levels. The cover photo of this catalogue depicts the work "Lightways" by artist Linda Jasmin Mayer (2015). She developed a lighting installation along with ewoLAB in Refshaleøen in Copenhagen. In the area of the former shipyard, lights react to the movements of passersby by means of a system composed of sensors and software.

Additional information on ewoLAB may be found at ewo.com/ewoLAB

Flora Kröss and Ernst Wohlgemuth founded ewo in 1996, developing it out of a metal factory in Sarnthein/Sarentino. Products and solutions from the South Tyrol company are used in the following areas:

- Airports and Logistics
   High-performance high pole systems for large areas
- Public Space Customized light in urban areas
- Architecture and the Arts Configurable systems within the constructed context
- Roads and Transit
   Precise, need-oriented solutions for safe mobility

### ewo Throughout the World—The Example of Airports

In 2011, we began outfitting airport aprons with LED lighting. Today, our technology is in use around the world.

### ewoIndividual

With ewolndividual, we design lighting systems that meet special demands in unique projects at both the technical and creative levels. In collaboration with architects and designers, we bring to the table openness to experimentation, solution-oriented know-how, and technical precision.

Our special solutions can take on a variety of forms:

#### 1 Lighting Control

In a process that is specific to each project, we sound out the possibilities of the distribution and limitation of the light. That ranges from the adaptation of the lighting unit to the development of completely new lens shapes.

#### 2 Materiality

We can fundamentally and in a detailed manner adapt the color, texture, and finish of our installations. With our extensive background in metalworking, we bring along experience with a whole variety of materials and processes.

#### 3 Construction

We implement complex creative ideas and bring into existence new forms and constructive solutions with luminaires.

#### 4 Additional Functions

Poles and housings can be dimensioned in such a way that they offer space and connections for additional technical functions while, at the same time, keeping them out of view.

#### 5 Building Integration

Our products do more than just fit into a context in terms of form and function. They can also take on a form that can actually be integrated into the building itself.

#### 6 Communications

Going beyond the function of mere illumination, light can be a signal and take on a communicative task. We work with the entire bandwidth of means of expression and, in so doing, include the possibilities of sensor technology and software-based control.

1 Lighting Control — Pont Schuman, Lyons

The plan involved the placement of the light sources at just 28 centimeters (11 inches) above the ground. With a specially developed lens shape, ewo brings non-dazzling light to the street that meets the EN 13201 standard, even from this low height.  $\searrow$  pp. 66–67

4 Additional Functions — St Martin Tower, Frankfurt

2 Materiality — Gradonna Mountain Resort, Kals Rusting steel creates the connection to the rugged surrounding mountain landscape. ewo treats the rolled steel girders in a process involving several steps so that from the very beginning onward, they have the desired characteristic and

a unified patina. ≥ pp. 48-49

5 Building Integration — Museum of the Bavarian Kings, Hohenschwangau This special model from ewo is integrated with a flush mount into the flat wall made from conglomerate.  $\gg p.\,50$ 

3 Construction — Quai Rambaud, Lyons In conjunction with lighting designers, ewo developed two extensive new pole-mounted lighting models which, in their form, lend a framework and structure to the shore area.  $\Im$  pp. 34–35

6 Communications — Unterer Stadtplatz, Kufstein

This centrally-controlled light management system allows for changeable color effects within individual spherical housing units, among other features. That means it is flexible enough to handle both predictable processes and exceptional scenarios with ease.  $\ge$  pp. 32–33

### LARGE AREA LIGHTING

For nearly 15 years, we have been focusing on high-mast systems to illuminate large areas. We have gained important experience in the field of secondary reflector systems—and were pioneers in the industry-wide conversion to LED technology.

One LED lighting unit (> p. 98) was specially developed by ewo for large area lighting; it supplies performance comparable to floodlight systems, while using up to 70 percent less energy and requiring much less maintenance. The modular character of the technology and its diverse configuration options make it possible for us to fine-tune the production technique precisely to the task at hand. Through good planning, the right solutions are created for your project.

Our systems meet major challenges, such as precise light direction and reliable temperature management, using high-quality components.

### OUTDOOR LIGHTING

Light is an essential element of design. Our technically sophisticated products direct, distribute, and confine it according to the demands of the given project. In the field of outdoor lighting, we develop systems for streets, squares, walkways, and parks.

Every object in a public space has an influence on the way we perceive our surroundings. We place great emphasis on form and design, a careful choice of materials, and high-quality craftsmanship in creating our products. In international partnerships, we work with designers and creative institutions on design concepts for public spaces.

### ewo The light you have been looking for.

Every project has specific requirements. That's why we have developed a product system that is adaptable down to the last detail. We create top-quality, technologically advanced solutions for the most varied of contexts.

### The LED Lighting Unit The Basic Building Block of Our Product System

The modular, highly-variable LED lighting unit is the basic building block for different lighting systems—from the bollard light to the high mast system. The size dimension and the number of the lighting units determine the brightness; the choice of the lens optics influences the distribution of the light; and the selection of the LEDs defines the color temperature. For the fine tuning of the system, the lighting units can be set within a luminaire independently of each other at different angles. When maintenance is performed, individual lighting units are removed from the entire system effortlessly.

#### Calculation of power values

The output values of the lighting system are calculated from the following formula:

\*\* From the formula, the approximate values can be calculated.
\*\*\* For figures on the possible number of lighting units per lighting system and on the number of LEDs per circuit board of the selected lighting unit, please see the product description.

#### 1 Lens Block

A variety of lens optics are available to choose from—with shining characteristics for roads, squares, or walkways, for use in tall poles or bollard lights. The lenses are made from sturdy acrylic glass (PMMA) and are therefore not subject to any yellowing process.

#### 2 Seal

The silicone sealing element completely secures the unit against water, dirt, and dust (IP rating IP67).

#### 3 LED Board

Three color temperatures are available for different atmospheres: cool white (5,700 K), neutral white (4,000 K), and warm white (3,000 K). LED boards can be exchanged upon reaching their operating life, while other components of the lighting unit continue to be used.

#### 4 Support Plate

The aluminum support plate ensures the efficient heat dissipation and maintenance of the critical temperature of the insulating layer, even with high ambient temperatures and an intense current feed to the LEDs.

Model				B1[mm]	Lighting units (LU)
	1-4	178	80	200	1
	/	200	80	200	1

The EL product series is a lighting system characterized by reduced forms. Different LED lighting elements, each with specific pattern characteristics, can be combined and their angle freely adjusted. They are installed flushly in a vertical aluminum column of any desired height or in a wall housing.

Façade lighting element

Area lighting element Accent lighting element

Accent lighting wall element

1

- 1.1 Color temperature: cool white (5,700 K) / neutral white (4,000 K) / warm white (3,000 K)
- 1.2 Housing accommodates up to 3 LED lighting units (3 LED PCB)
- 1.3 Current feed: 200 mA–600 mA, depending on ambient temperature
- 1.4 Electronic operating device with DALI interface or 1–10 V or stand-alone programming
- 1.5 LED lighting units adjustable

2

- 2.1 Different pattern characteristics for street, walkway, and large area lighting
- 2.2 Lens made from PMMA, with aluminum support plate

3

- 3.1 Recessed in stainless steel, frameless cover in single-pane safety glass (ESG)
- 3.2 Integration in column/bollard: extruded aluminum profile (optional COR-TEN steel sheet) with cable insertion opening, junction box and service door
- 3.3 Wall integration: plasterkit made of galvanized steel
- 3.4 Finish: polyester powder coating, silver-gray (RAL 9007/DB 702), other colors upon request

Configuration examples 3–5 Lighting bollard EL380 / EL710 / EL1250

### Façade lighting element

The lighting element can be used for surface lighting of façades and fitted with up to 3 lighting units. Each lighting unit can be adjusted individually and thus adapted ideally to the application.

Area lighting element

This element is suitable for lighting streets and squares. Multiple elements can be integrated into the column. One lighting unit is inserted per element. You can choose different pattern characteristics to suit the specific requirements.

Accent lighting element

This lighting element permits uniform lighting of walkways and setting of accent points. One lighting unit is inserted per element.

Accent lighting wall element

This element, which is also suited for the illumination of walkways, can be installed flush with the wall.

1.1 Service door surface-mounted

 $\rm H4$  = Variable length (Depending on the light point height)

### Poles

ewo develops complete lighting solutions. These also include the production of poles. In so doing, we ensure the ideal interaction of the individual components, from the mechanical interfaces to the matching finish. Changes to the mounting heights are effortless, and with additional adaptations such as the application of revised openings or special mounting variations, we are just as flexible. Additionally, at our facilities in Kurtatsch/Cortaccia as well as our metal manufacturing plant that is still active in Sarnthein, we create custom pole constructions with a great demand upon the creative and handcrafted qualities.

All of the poles meet high standards of quality. The light poles are certified according to the European standard EN 40-5. Welding parameters as well as other requirements that are essential to the structural engineering are tested during regular independent audits.

### ARCHITECTURAL LIGHTING

After dark, the targeted illumination of spaces and volumes plays an essential role in our experience of the environment. With systems from our Architectural Lighting product line, the color, direction, distribution, and intensity of the light can be precisely controlled. The design adheres to essential technological and heat management requirements. In addition, the forms of these products are unobtrusive—of primary importance is the effect that they have in the dark.

#### Materials

Projector housing in aluminum, silver anodized, mounting bracket in stainless steel satin finish, cover made of tempered safety glass, screw joints in stainless steel, silicone gasket, cable connection in nickel-plated brass.

#### Lighting technology

3 high-performance LEDs, metal core circuit board, precision lenses made of PMMA, external driver, incl. 2 m connection cable.

#### Application area

Architectural floodlighting, object and effect lighting, floor mounting, wall mounting and ceiling mounting.

Power rating	3.6 W, 350 mA 7.2 W, 700 mA
Beam angle	8° 24° 41° 13+41°
Color temperature	RGB Warm white, 3,000 K Neutral white, 4,500 K Cool white, 6,000 K
Weight	0.9 kg
Accessories	Driver, current feed: 350–700 mA DMX Driver DMX Controller

#### Materials

Power rating	3.6 W, 350 mA 7.2 W, 700 mA
Beam angle	8° 24° 41° 13+41°
Color temperature	Warm white, 3,000 K Neutral white, 4,500 k Cool white, 6,000 K
Weight	1.9 kg

#### Materials

Projector housing in aluminum, silver anodized, mounting bracket in stainless steel satin finish, cover made of tempered safety glass, screw joints in stainless steel, silicone gasket, cable connection in nickel-plated brass.

#### Lighting technology

9 high-performance LEDs, metal core circuit board, precision lenses made of PMMA, external driver, incl. 2 m connection cable.

#### Application area

Architectural floodlighting, object and effect lighting, floor mounting, wall mounting and ceiling mounting.

Power rating	10.8 W, 350 mA 18.5 W, 600 mA
Beam angle	8° 24° 41° 13+41°
Color temperature	RGB Warm white, 3,000 K Neutral white, 4,500 K Cool white, 6,000 K
Weight	1.7 kg
Accessories	Driver, current feed: 350- DMX Driver DMX Controller

600 mA

#### Materials

Projector housing in aluminum, silver anodized, mounting bracket in stainless steel satin finish, cover made of tempered safety glass, screw joints in stainless steel, silicone gasket, cable connection in nickel-plated brass.

#### Lighting technology

18 high-performance LEDs, metal core circuit board, precision lenses made of PMMA, external driver, incl. 2 m connection cable.

#### Application area

Architectural floodlighting, object and effect lighting, floor mounting, wall mounting and ceiling mounting.

Power rating	21.6 W, 350 mA 37 W, 600 mA
Beam angle	8° 24° 41° 13+41°
Color temperature	RGB Warm white, 3,000 K Neutral white, 4,500 K Cool white, 6,000 K
Weight	2.7 kg
Accessories	Driver, current feed: 350–600 mA DMX Driver DMX Controller

#### Materials

Projector housing in aluminum, silver anodized, mounting bracket in stainless steel satin finish, cover made of tempered safety glass, screw joints in stainless steel, silicone gasket, cable connection in nickel-plated brass.

#### Lighting technology

30 high-performance LEDs, metal core circuit board, precision lenses made of PMMA, external driver, incl. 2 m connection cable.

#### Application area

Architectural floodlighting, object and effect lighting, floor mounting, wall mounting and ceiling mounting.

Power rating	36 W, 350 mA 61.7 W, 600 mA
Beam angle	8° 24° 41° 13+41°
Color temperature	RGB Warm white, 3,000 K Neutral white, 4,500 K Cool white, 6,000 K
Weight	5.3 kg
Accessories	Driver, current feed: 350 DMX Driver DMX Controller

-600 mA

# R60

#### Materials

Projector housing in aluminum, silver anodized and stainless steel, mounting sleeve in stainless steel, cover made of tempered safety glass, screw joints in stainless steel, silicone gasket, cable connection in nickel-plated brass.

#### Lighting technology

1 high-performance LED, metal core circuit board; precision lense made of PMMA, external driver, incl. 2 m connection cable.

#### Application area

Architectural floodlighting, object and effect lighting, floor mounting.

Power rating	1.2 W, 350 mA 2.4 W, 700 mA
Beam angle	8° 24° 41° 13+41°
Color temperature	Warm white, 3,000 K Neutral white, 4,500 K Cool white, 6,000 K
Weight	1 kg
Accessories	Driver, current feed: 350–700 mA DMX Driver DMX Controller

# R100

#### Materials

Projector housing in aluminum, silver anodized and stainless steel, mounting sleeve in stainless steel, cover made of tempered safety glass, screw joints in stainless steel, silicone gasket, cable connection in nickel-plated brass.

#### Lighting technology

3 high-performance LEDs, metal core circuit board, precision lenses made of PMMA, external driver, incl. 2 m connection cable.

Architectural floodlighting, object and effect lighting, floor mounting.

Power rating	3.6 W, 350 mA 7.2 W, 700 mA	43.5	
Beam angle	8° 24° 41° 13+41°		
Color temperature	Warm white, 3,000 K Neutral white, 4,500 K Cool white, 6,000 K		
Weight	1.4 kg		
Accessories	Driver, current feed: 350–700 mA DMX Driver		

DMX Controller

# R170

#### Materials

Projector housing in aluminum, silver anodized and stainless steel, mounting sleeve in stainless steel, cover made of tempered safety glass (can bear loads of up to max. 3,000 kg), screw joints in stainless steel, silicone gasket, cable connection in nickel-plated brass. LED inset may be adjusted up to  $\pm$  6° for the optimal coordination of the beam angle to the application.

#### Lighting technology

18 high-performance LEDs, metal core circuit board, precision lenses made of PMMA, internal driver, incl. 2 m connection cable.

#### Application area

Architectural floodlighting, object and effect lighting, floor mounting.

Power rating	21.6 W, 350 mA 37 W, 600 mA
Beam angle	8° 24° 41° 13+41°
Color temperature	Warm white, 3,000 K Neutral white, 4,500 K Cool white, 6,000 K
Weight	13 kg
Accessories	Driver, current feed: 350–600 mA DMX Driver DMX Controller

### URBAN FURNITURE

"The starting point for the development of the Up series was the simple, rounded bollard. Different functions were added by making incisions and the main shape was converted into a broad and versatile range of products—all of them seemingly floating in the air on a cushion of light." Torbjørn Anderssen, Norway Says

Up is the first joint project by ewo and the Norwegian design group Norway Says. The series encompasses lighting bollards, bicycle stands, park benches, and other objects designed for the urban environment. Their combination of design, technology, and light makes public spaces more attractive and livable. The universal formal concept of the line now offers designers the possibility of developing a more aesthetically logical cityscape.

## LB21

Lighting bollard with symmetric light distribution for illuminating open spaces. Additional accent lighting at ground level.

#### Materials

Stainless steel bollard.

Buried base made of hot-dip galvanized steel, flange plate made of stainless steel.

Finish: polyester powder coating (DB 703).

LED lighting unit in aluminum, sealed with polyurethane resin.

#### Lighting system

2 LED modules each with 6 high-performance LEDs, color temperature neutral white, 4,000 K, connected rating 14.4 W. Electronic control gear.

#### Assembly variations

Flush-mounted using buried base, alternatively surface-mounted using flange plate. Designed for feed-through wiring.

Weight10.5 kgIngress protectionIP65Protection ratingI or II
