

ewo: South Tyrolean company at the “Light + Building” 2014 fair in Frankfurt.

“Light + Building” is the most important trade fair in the world in the lighting and building technology branches. Every two years it is a platform at which the industry presents its innovations in lighting, electronics, home and building automation and software for construction. The common theme is energy efficiency. Ewo will participate this year for the fourth time.

ewo is a producer of high-quality lighting systems for public spaces. The company is a pioneer in the branch and offers innovative technical solutions for lighting, customised design and competent lighting planning.

At Light + Building, ewo will present several interesting innovations: an improvement in the appearance of its lighting systems thanks to a flat glass cover, more flexibility in the adaptability of light technology thanks to an adjustable light unit, extension of the F-system series to include different capacity ratings, the addition of both a further light distribution system for hall lighting and of a new product called PV, an indirect LED post-top luminaire.

The ewo team will be available at the booth in exhibition hall 5.0 Stand B30 and will be glad to answer any questions and offer any advice. For further information, please consult our website:
