

Large Area Lighting

There are few areas of public life in which the subject of security takes on such a critical position as in air traffic. The lighting on the apron creates security if it provides its service without compromise, meets all standards, and is reliable and durable.

ewo is the forerunner in the use of LED technology for large areas and represents the highest standard in airports and logistics areas. The products have proven themselves for both smaller regional airports and for global hubs. They are so robust that they have been used in the Siberian winter but also function reliably in the Arabian heat. Maintenance is required more rarely and, as a result of the modular construction, is also greatly simplified.

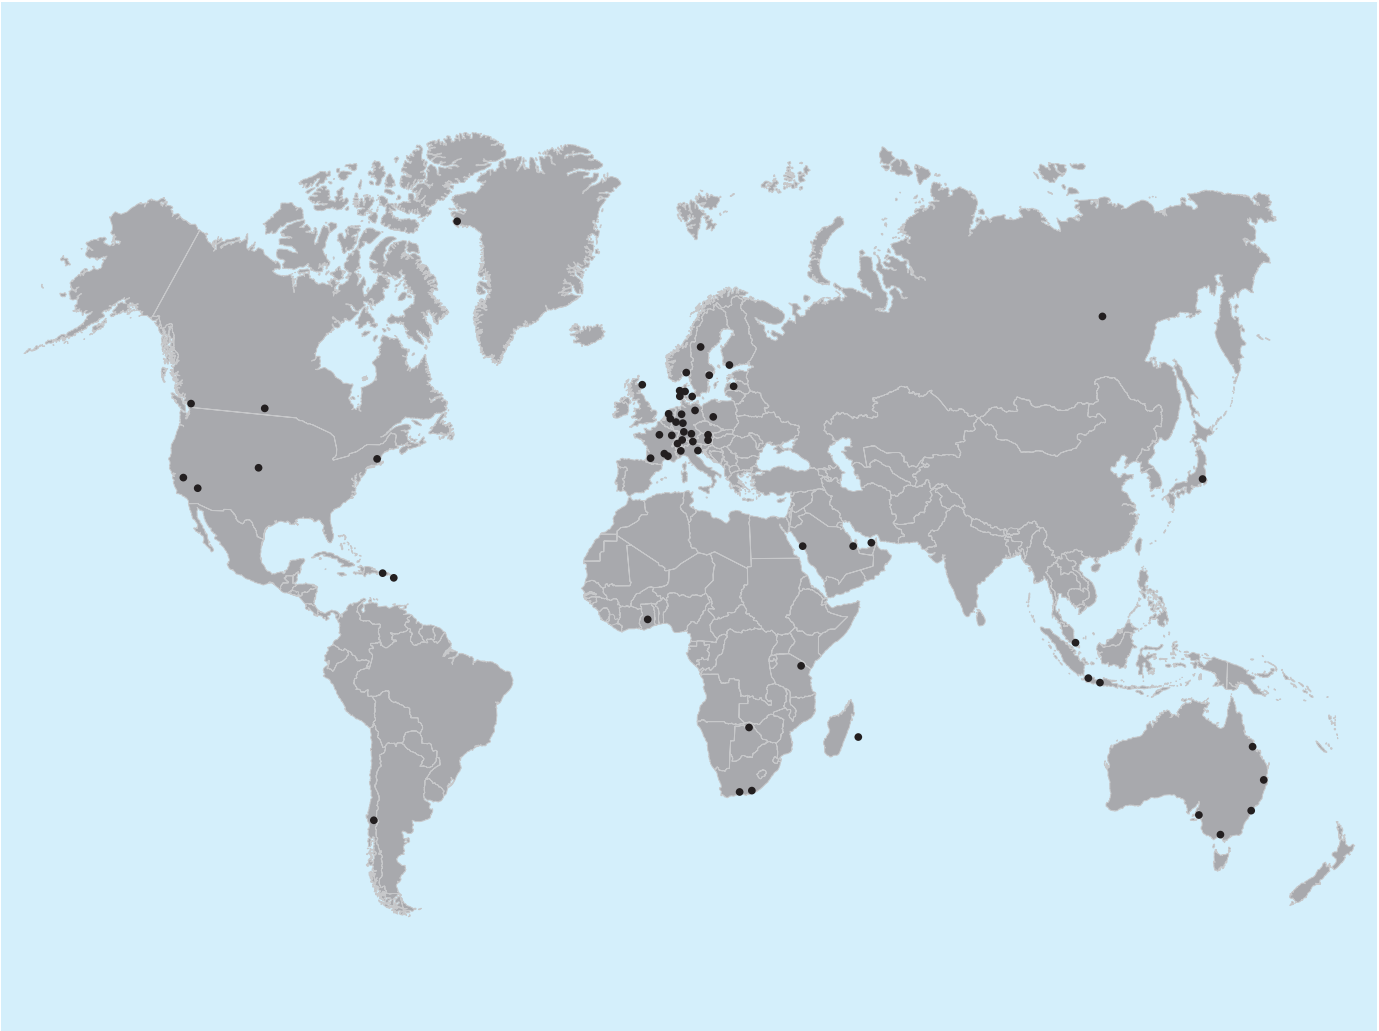

The people who work on-site are convinced: the lighting is perceived as brighter, and as a result of the higher color rendering index, things such as documents can be better recognized. Wherever light is needed, it is even and available without dazzling. That reduces stress and tension at work and, in so doing, increases the level of security.

Using the full potential of LEDs for large-surface illumination.

For over 15 years, we have been focusing on high mast systems to illuminate large areas. We have gained important experience in the field of secondary reflector systems, and were pioneers in the industrywide conversion to LED technology. ewo's innovation was to use one LED lighting unit as the building block for large area lighting; this supplies performance comparable to floodlight systems while using up to 70 percent less energy and requiring less maintenance. The modular character of the technology and its diverse configuration options make it possible for us to fine-tune the production technique precisely to the task at hand. Through good planning, we create the right solutions for your project. Our systems meet major challenges, such as precise light direction and reliable temperature management, using high quality components.

The R-System provides flexible and long lasting high performance lighting.

The modular construction R-System floodlight family consists of individual panels that are grouped by performance capability (R1–R6) depending on the required output. Each panel can be tilted and consists of 128 high-performance LEDs. The glass cover of the panels offers additional protection for the lens optics and makes simplified cleaning possible.

The panels are manufactured in a die-cast aluminum process and are available in untreated aluminum and polyester powder-coated finishes. The powder-coated variant offers additional protection for use in demanding environments where corrosion is a risk, such as seaside settings.

The equipment can be fitted with various lens optics, allowing it to react to different applications in a flexible manner. In addition to area lighting and special distribution of the light for airport apron and production hall areas, spot optics are now also available for targeted illumination and spot lighting. Our tried and true multilayer concept forms the basis for this development: each optical surface illuminates the entire assessment field, and the lighting intensity on a given surface is achieved through a layering of the light distributions of the individual LEDs. Even if one of them fails, the evenness is maintained.

The R-System provides a higher lumens package with significantly less electricity consumption. The product also offers improved heat management. Heat dissipation now takes place by means of cooling fins which, as a result of their special arrangement, avoid detritus buildup, therefore guaranteeing long term functionality.

The compact construction form corresponds exactly to the size of conventional floodlights, making a one-to-one retrofitting of existing systems possible. Two mounting variants are available, a mounting bracket and an adapter for cable hanging.

The R-System can be controlled by means of DALI, but it also allows for wireless control via radio. The high-performance lamp control gear that was developed especially for this product allows for the partial switching and dimming of individual panels.

Product variant R4
Finish: polyester powder coating

Product variants R1–R6

Technical Details

- 1
 - 1.1 Color temperature: cool white (5,700 K) / neutral white (4,000 K)
 - 1.2 Housing accommodates up to 6 panels, each panel 1 DALI address
 - 1.3 Current feed: 500 mA–700 mA, depending on ambient temperature
 - 1.4 Electronic operating device with DALI interface or 1–10 V
 - 1.5 Allowed ambient temperature range -40 to +55 °C
- 2
 - 2.1 Various light distributions for large area, high bay or street lighting
 - 2.2 Lens made from PMMA
- 3
 - 3.1 Lamp housing in die-cast aluminum, cover in single-pane safety glass (ESG)
 - 3.2 Bracket made of hot-dip galvanized steel, holder made of aluminum
 - 3.3 Finish: polyester powder coating, silver (RAL 9006/DB 701)

⚡ CE IP66 RoHS IK08

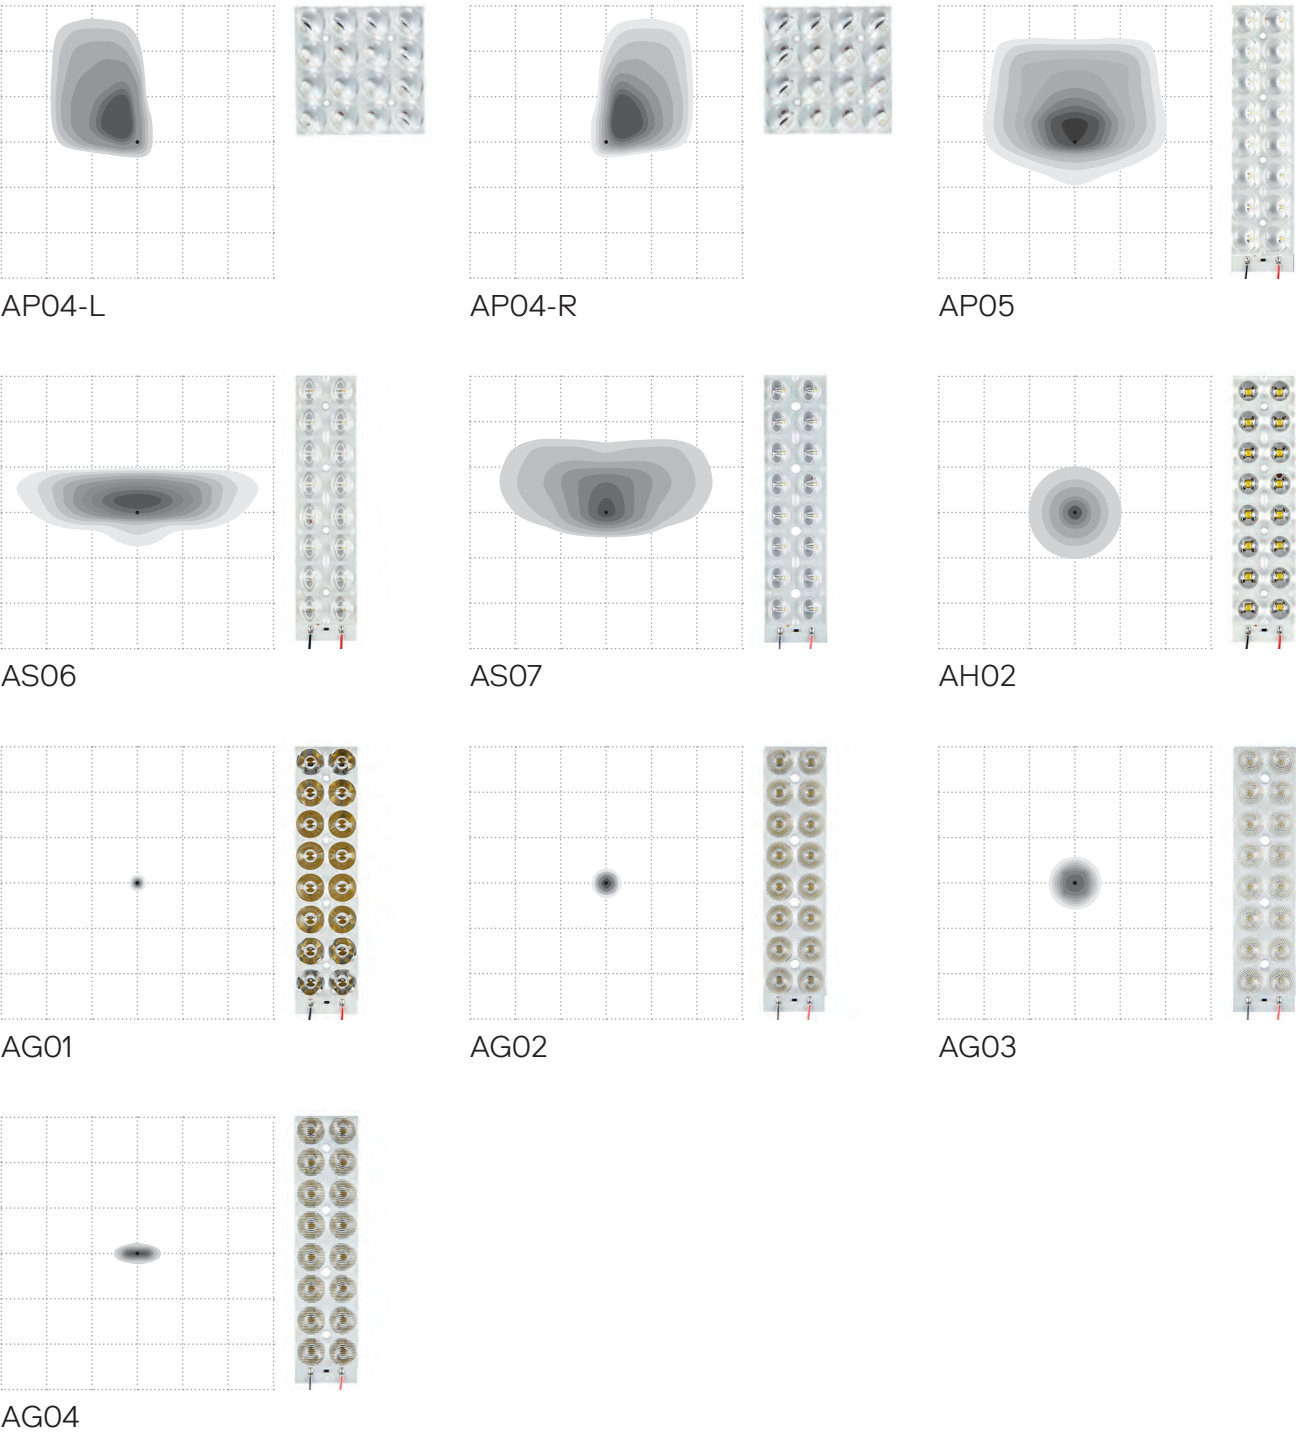

Modular Design, Highly Flexible Solutions

Every project has specific requirements. That's why we have developed a product system that is adaptable down to the last detail. We create top-quality, technologically advanced solutions for the most varied of contexts.

Light Distributions

The system allows for a variety of light distributions depending on the choice of lens optics.

7 mm = 1 m / ● Light point height (LPH) = 1 m
AG = spot optic
AP = place optic
AH = highbay optic
AS = street optic

Efficient, Sustainable Spare Parts Management

The R-System is easy to upgrade, repair, and adjust. Central components of the lighting system, including LED circuit boards, are easy to swap out, thanks to the intelligent design of our modular system. Maintenance and repair costs are kept to a minimum, while quality standards remain consistent.

Samples of easily swappable parts include:

Ventilator element

Lens head screw M4 x 8 Torx

Cable feedthrough

PCB circuit board

Gasket

Glass covering

Lens optic

Clamp

CP590 driver

Support for Integrated Solutions

Alongside its apron floodlights, ewo equips airport customers with a complete lighting package including design and planning support. Our experienced lighting engineers work closely with leading airfield lighting designers worldwide, providing fully compliant designs in accordance with the most common international standards like ICAO, EASA, MOS and ISNEA. Beyond the lighting design, we offer support and detailed mounting and installation instructions for the poles.

Light distribution simulated in 3D

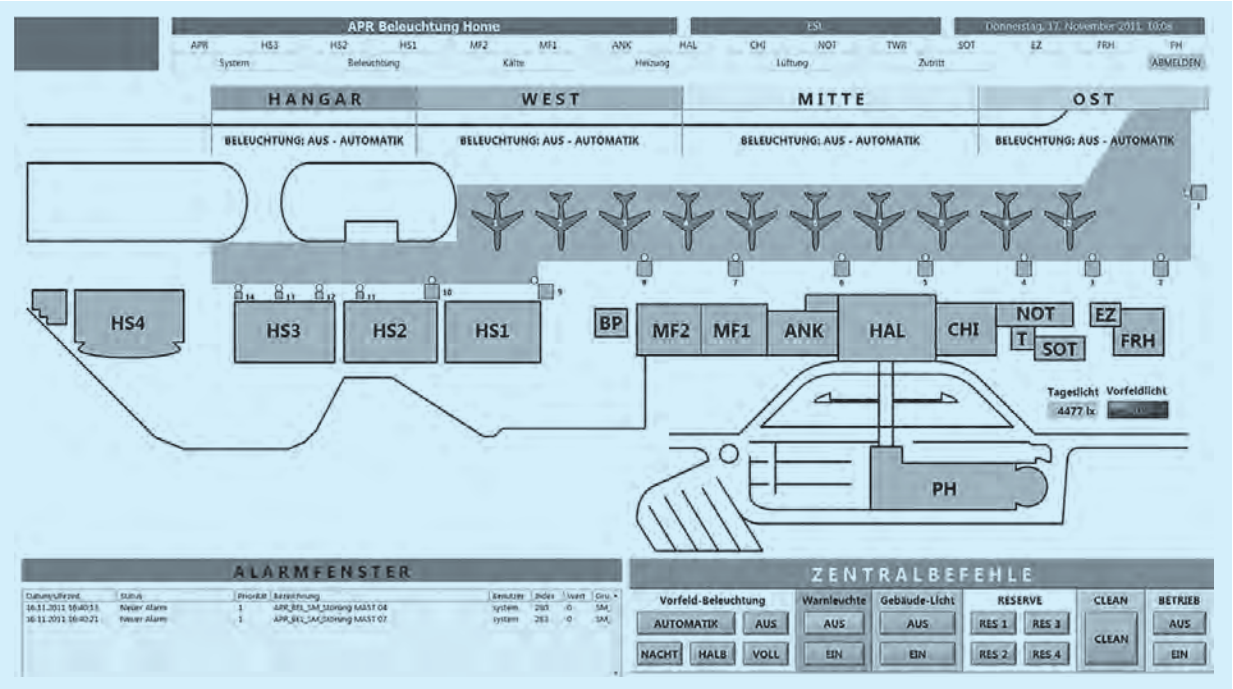

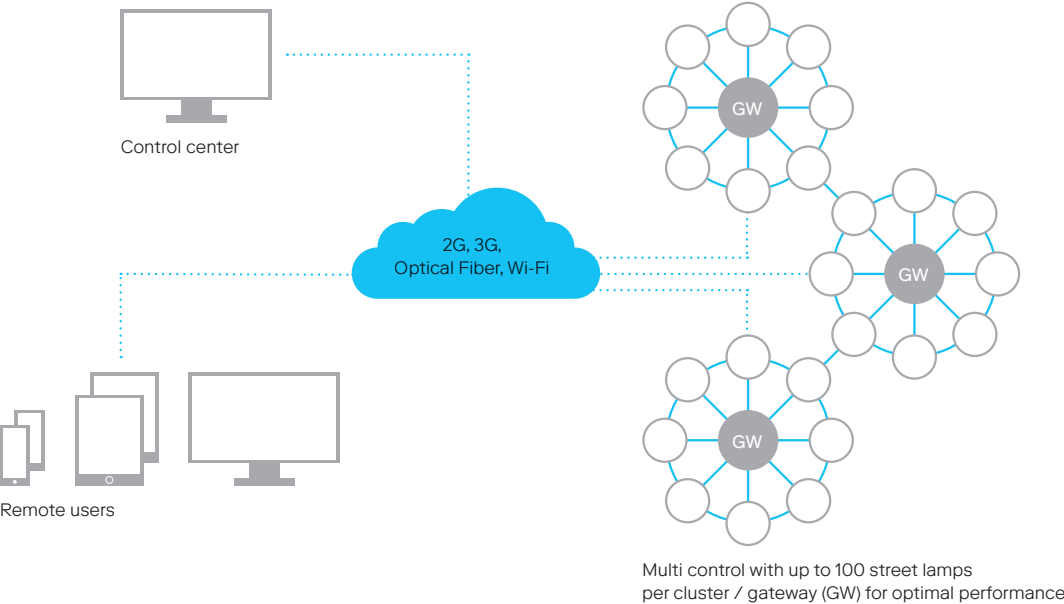

False color rendering demonstrating product illuminance

Light positioning schematic

Radio and Light Control

Our products may be fitted with a system to allow for wireless data communication within your networks. The 2-way communication between floodlights and control software enables full control and monitoring of the lights and will lead to more cost-effective and responsive maintenance.

User interface

Greater Control and Efficiency

Our system harnesses the full potential of LED technology with an intelligent wireless floodlight control system. A single dynamic apron dimming scale creates further energy savings (up to an additional 50 percent) and increases LED product life.

False color rendering demonstrating product dimming capabilities

Munich Airport Terminal 1, P185

Together with Munich Airport, ewo is carrying out a showcase project for energy-efficient apron lighting systems: Two of the existing high mast systems were each fitted out with six high-performance LED floodlights, which reduced the energy consumption of the systems by around 46 percent. The typology and the geometric dimensions of this system are oriented on tried and tested standards, so that existing masts can easily be converted and equipped with the new, energy-efficient technology.

The connection to a light management system provides further energy savings. Simple light source controls enable the creation of numerous light scenarios to perfectly suit the respective requirements.

In addition to the high level of energy reduction, the LED solution provides a significantly reduced maintenance level and a service life of more than 50,000 h, making an important contribution toward a more sustainable operation of the lighting system.

Munich Airport Terminal 1, P185

The LED floodlight is mounted onto the existing holder.

White light has a considerably higher color-rendering value than NAV lamps, creating a clear yet relaxed sense of vision.

Each panel is fitted with 152 lighting units from the DP31 product line.

In direct comparison with the existing NAV system, LED technology consumes 46 percent less energy, while maintaining compliance with all specifications.

Technological Comparison

Before

High mast systems:

- High-pressure sodium lamp:
4 × SAP – 1,000 W per pole
2 × SAP – 400 W per pole
- Electromagnetic ballast, η = 90 %
- Power consumption in total: 147.84 kW
- Lighting immission: $R_n > 3 \%$

After

High mast systems:

- LED Lighting units:
5 × F32 5,700 K, 388 W per pole
1 × F16 5,700 K, 166 W per pole
- Electronical driver, η = 92 %
- Power consumption in total: 59.82 kW
- Lighting immission: $R_n = 0 \%$

Savings*

59.5 %

- 512,682.00 kWh/year
- 307,609.00 kg CO²/year
- 76,000.00 €/year

* CO² calculation at an energy mix of 600 g/kWh, saving at <0.15 €/kWh and 4,500 hours in service per year

Technical Data

Classification in compliance with

12464-2: ICAO Annex 14

Illuminance, $E_m = 30 \text{ lux}$, $U = 0.25$

Area illuminated: 120,000 m²

Power consumption/area: 0.49 W/m²

Power consumption in total: 59.82 kW

Lighting system

- Lighting systems: High mast systems
5 × F32 (350 mA)
1 × F16 (300 mA)
- Mounting height: 34.0 m

Lighting technology

- Lighting unit in operation: LP32
- LED: Luxeon M, 159 lm/W
- Light colour: Cool white, 5,700 K
- Number of LEDs: 3 × 1 Multichip
- Current feed: 350 mA
- Connected power: 388 W

Lighting management

Light control over DALI

- Constant light output regulation
- Automatic lowered night-time lighting (50 %)
- Remote maintenance

Due to the use of various optical lenses, both the apron and the taxiway can be provided with the optimum level of light in compliance with the respectively applied specifications.

Innsbruck Airport, Austria, 2011
 The realization that LED technology provides improved light quality with lower costs while protecting the climate and the night sky was the deciding factor: the Innsbruck Airport, as the first one in the entire world, engaged ewo to switch over the entire apron illumination to LED.

Stuttgart Airport, Germany, 2015
In a multistage project, ewo supplied the airport with over 60 F-32 floodlights. This showed, once again, the effectiveness and sustainability of switching from existing conventional lighting systems to LED. The new, intelligently-controlled apron lighting dims automatically when the apron is not in use—cutting costs and reducing environmental impact.

Melbourne Airport, Australia, 2014-15
 With 50 floodlights of the F32 model on six high mast systems, the first Australian airport is switching over to LED lighting. The functioning method of the system has been coordinated with the high ambient temperatures.

Container terminal

ewo

For 20 years, ewo has been bringing light to a variety of places: picturesque walking trails, urban gathering points, streets, buildings, cultural venues, and airports, in addition to other transport-related and industrial settings. For us, know-how means harnessing the current state of technology in order to create custom-tailored solutions.

At our facility in South Tyrol, we develop and craft high-quality products for distributing, controlling, and limiting illumination in public spaces. Our innovations revolve around a modular LED lighting unit. It is the global starting point for precise and sustainable lighting scenarios of any scale.

We bring passionate curiosity to each and every individual challenge, whether specific lighting effects, special requirements regarding design, color and material of the luminaires, fragile or extreme settings, or explicit technical requirements. We also place great importance on cultural and artistic issues as well as on experimental interaction with architecture, art, and design.

ewo is a family business. We value clear communication—not only with each other, but also with our clients, project partners, and suppliers. Our solutions emerge out of an environment of mutual exchange and a creative and open mindset—these innovations have turned us, together with our products, into a pioneering force in the industry.

Contact

We understand that special locations require light to be dealt with in a special way. That is why we consider direct dialogue with you so important. It serves as the basis for our developing a lighting system that fulfills your individual needs.

We are always happy to advise you, simply give us a call.
